- Wired communication
- Wireless communication

Systems Available

- SitePro Synergy Series for Network LTC Plus
- SitePro Synergy Series for Network GDC
- SitePro Synergy Series for OSMAC

Multi Manual Irrigation Made Easy

From the SitePro Synergy Series central computer, you can access all stations on the golf course. Select up to 6 stations to operate at the same time; set the length of time to operate and send. All chosen stations operate simultaneously for the assigned runtime. From the field satellite or from the central controller, Multi Manual irrigation saves time and energy.

Password Levels Keep Your Information Safe

With Toro's exclusive password level protection, you decide who can have access to your irrigation information. You can allow weekend staff to operate the system but not be able to make any changes. If you are the only user of the system, you can turn off the password system until you need it.

Specifying Information

Model Number	Description
SP-01-1-11	SitePro Synergy Series for OSMAC
SP-01-1-13	SitePro Synergy Series for Network LTC Plus
SP-01-1-18	SitePro Synergy Series for Network GDC
